# Providing solutions for cutting-edge toolholding

Our holistic toolholding systems excel with extraordinary reliability, high precision and outstanding quality.

**Pioneering spirit** Fritz Weber, a Swiss master craftsman, tapped into the promising optimism in the 1950s and founded a small business called Fritz Weber Feinmechanik und Werkzeugbau. With his innovative spirit and stern determination, Fritz Weber gradually expanded his range of products. The company, now called REGO-FIX AG, achieved international recognition in 1972 with the invention of the ER clamping system. Thus, changing the toolholding industry forever. The ER System, made in Switzerland, is an industrial standard clamping element. It set the industry standard and even became DIN Standard (DIN 6499) in 1993. Today, the ER collet made by REGO-FIX is still the most used clamping collet worldwide.

**Shaping the future** REGO-FIX is an international family-owned company that is run by the sons of Fritz Weber. With its over 220 employees, REGO-FIX manufactures and markets high-precision toolholding systems worldwide. Headquartered in Tenniken, Switzerland, the company has established itself

as one of the leading manufacturers of toolholding systems and enjoys an excellent industry-wide reputation. Through its close network of distributors and subsidiaries in the US and China, REGO-FIX is strategically well positioned and possesses a worldwide presence in key markets. With groundbreaking product inventions, REGO-FIX developed from a small company to a global solution provider for cutting-edge toolholding systems. At the core of every product lies an aim for machining excellence and a passion for precision.

**Cradle of precision** REGO-FIX manufactures its products in Switzerland to fit highest quality standards. The products are used in the fields of automotive, aerospace, medical engineering, watchmaking, telecommunications and also in the die and mold industry.

micRun® System

## Every micron counts

Closing the gap between the powRgrip® and the ER System, the micRun® System convinces with a total system runout of  $\leq 3 \mu\text{m}$ .

**Swiss high precision** An excellent runout accuracy paired with low vibration, not only increases your machining quality, but enhances your overall productivity and increases your tool life, thus successfully lowering your cutter costs. With a total system runout of  $\leq 3 \mu\text{m}$  at  $3 \times D$ , the micRun® System provides all the benefits of excellent runout accuracy.

This is why micRun® is the ideal system for all micro machining applications and is successfully used in industries like watchmaking or medical engineering. In addition, our unique collet-locking system retains the collet safely inside the nut. This minimizes your risk of faulty operations or possible damages which may occur if the collet accidentally falls to the ground. Another great benefit of our collet-locking system is the tool-free removal of the collet.

### Key advantages

Total system TIR  $\leq 3 \mu\text{m}$  at  $3 \times D$ .

Designed for high-speed cutting.

Silent and low vibration due to grooveless clamping nut.

# Three systems – one brand

Our brand unites three different toolholding systems. Each system has different strengths to fit your machining needs, but at the heart of each system lies our aim for toolholding excellence.

## powRgrip® System

For high-end machining with a total system **TIR  $\leq 3 \mu\text{m}$  at 3xD**

### PG colletholders

Taper accuracy AT3

Surface finish  
max. Ra 0.25

High transferable torque  
up to 1,100 Nm

### PG collets

Clamping range  
from 0.2 up to 25.4 mm

Special surface treatment  
ensures longevity

Clamps all shanks  
with tolerance h6

Vibration dampening  
for high RPM

### A holistic system approach

All parts are designed for exclusive fit to ensure toolholding excellence.

## ER System

Our ideal system for standard machining

### ER colletholders

Runout TIR  $\leq 3 \mu\text{m}$

Taper accuracy AT3

Surface finish max. Ra 0.25

Factory balanced

### ER collets

Wide clamping range: from ER 8 up to ER 50 and  
for diameters from 0.2 mm up to 36 mm

Clamping capacity 0.5 mm to 2.0 mm

Runout TIR  $\leq 10 \mu\text{m}$  at 3xD for ER standard

Runout TIR  $\leq 5 \mu\text{m}$  at 3xD for ER-UP

### ER clamping nuts

Collet-locking system

Balanced by design

Special surface treatment improves transferable torque  
and protects against corrosion

## micRun® System

Total system **TIR ≤3 µm at 3xD**

### MR colletholders

Taper accuracy AT3

Polished surface for improved performance

Balanced for high RPM

Vibration dampening

### MR collets

Clamping range from 1.0 mm to 20.0 mm

Nominal diameter shanks h11

### MR clamping nuts

Collet-locking system

Balanced by design

Grooveless design for higher RPM

Freewheel wrench head

### A holistic system approach

All parts are designed for exclusive fit to ensure toolholding excellence.

In our professional environment, the winning combination of REGO-FIX torque wrench and freewheel wrench head enables our employees to properly clamp drilling and milling tools fast and with repeated accuracy.

Felix Fischler Founder of Fischler Camtech AG

Medical engineering with micRun®

## Clamp drilling and milling tools reliably with micRun®

Tool changing in dental laboratories sets special requirements for the toolholding system. Discover how our customer mastered the challenge.

**Challenging industry requirements** The specially designed 5-axis machining centers have to switch between different tools frequently when carrying out abutments, splints, crowns, bridges and complete tooth replacements made of titanium, chromium-cobalt (CrCo), wax, PEEK and PMMA, as well as of zirconium, glass and mixed ceramics. Common toolholding systems with collets that are integrated directly into the machining centers have proven to be unfavorable.

**Successful customer** Dental laboratory Fischler Camtech AG in Möhlin, Switzerland, works successfully with the micRun® toolholding system from REGO-FIX. Their collets are mounted into the small micRun®-HSK-colletholder, which enables the tools to be preadjusted exactly and clamped with repeated accuracy. Furthermore, their CNC machines can exchange different drilling and milling tools from the magazine stations automatically in the motor milling spindle with speeds of up to 50,000 rpm.

**Clean thing** A particular benefit of the micRun® toolholding system is the slim clamping nut that is smooth on the outside. Dust and small fragments cannot stick and the surface is easy to clean. So easy in fact, that dental technicians can remove any dirt quickly and easily using fluid and by blowing it off from the three separate components – the toolholder, the collet and the clamping nut. Furthermore, the clamping nut has only small interfering contours. The drilling and milling tools that are inserted are clamped using a torque wrench that adjusts the clamping nut via freewheel wrench.

**Excellent runout TIR** The REGO-FIX torque wrench and freewheel wrench head enable Fischler Camtech employees to properly clamp drilling and milling tools fast and with repeated accuracy. Considering that dental technicians are usually not trained machinists, so the simplicity of the assembly is a winning argument.

The properly assembled nuts then retain a reliable concentricity of 3 µm. They can therefore machine to the required accuracies and achieve the required surface quality. Furthermore, the high concentric precision reduces wear on the cutting edges significantly. The milling tools therefore have a noticeably longer tool life. In addition to the standard versions, the micRun® nut is also available with a smaller outer diameter. Fischler Camtech uses this Hi-Q®/MRM version successfully in their production of small medical parts.

This slim variant is always convenient if minimal interfering contours are required. The slim design enables any geometry that has to be machined to be achieved without problems.

**Alan Fastner** Product Manager at REGO-FIX AG

#### At a glance

In high rpm office machines with low force and limited space, micRun® is the ideal well-balanced toolholding solution with low runout TIR.

The smooth design and grooveless clamping nut allows for quiet machining and prevents abrasive dust from settling on the toolholder.

The slim micRun® design is an important feature in milling small cavities where minimal interfering contours are mandatory.

**Customers from all around the world  
rely on Swiss-made REGO-FIX products.  
From Tenniken, we deliver customers  
in fast-paced industries with  
the highest demands for precision.**

**We offer competitive solutions**

# Minimize runout – boost productivity

**Experience outstanding quality** We at REGO-FIX know how to minimize your runout, increase quality and boost your productivity. This is why we designed our micRun® System to fulfill diverse criteria all crucial for achieving machining perfection.

The MR toolholder, collet and nut together make the micRun® System a high-quality and high precision option for challenging machining applications such as watchmaking, micromachining and medical engineering. The micRun® System has a TIR of 3 microns and is perfectly balanced for high-speed machining. The contours are slim and smooth which results in perfect, stable and quiet rotation in the machine.

What you see is what you get: all our products bear the REGO-FIX triangle – our seal for outstanding Swiss quality.

**Swiss quality standard**

Our products marked Swiss made are manufactured at our headquarters in Tenniken, Switzerland.

# Steep taper collets SK

Universally suitable for different machining applications.

DIN 69871 / DIN ISO 7388-1

## Features and benefits

### Total system runout TIR $\leq 3 \mu\text{m}$

Our holistic system consists of an micRun® collet holder, collet and clamping nut. All components together ensure best runout and accuracy.

### Collet holder runout TIR $\leq 1 \mu\text{m}$

Measured from inner taper to outer taper.

### Taper accuracy AT3

Better spindle-to-holder fit and accuracy.

### Surface finish max. Ra 0.25

Achieve high clamping force and high transferable torque.

### Balancing

100 % balanced to G 2.5 @ 22,000 rpm.

### MR clamping nut included in delivery

Guarantees highest clamping force and best balancing.

### Vibration dampening

Our holders offer good vibration dampening to sustain a high surface finish and can help prevent chatter.

Guarantees highest clamping force and best balancing.

### Vibration dampening

Our holders offer good vibration dampening to sustain a high surface finish and can help prevent chatter.

### Expert advice

For all HSK-A and HSK-E form colletholders a range of coolant tubes (KSR) is available.

For KSR part numbers please refer to page 46.

# HSK forms and their key characteristics

HSK

DIN 69893

ISO 12164

## Form A\*

- // Standard type for machining centers and milling machines
- // For automatic tool change
- // Coolant supply through center via coolant tube
- // Drive keys at the end of HSK taper
- // Hole for data carrier DIN STD 69873 in the flange is available on request

\* Also usable in form C applications with side hole for manual tool change.

## Form B

- // For machining centers, milling and turning machines
- // With enlarged flange size for higher radial rigidity
- // For automatic tool change
- // Coolant supply through the flange
- // Drive keys at the flange

Available on request.

## Form C

- // For transfer lines, special machines and modular tooling systems
- // For manual tool change
- // Drive keys at the end of HSK taper

## Form D

- // For special machines
- // With enlarged flange size for higher radial rigidity
- // For manual tool change
- // Coolant supply through the flange
- // Drive keys at the flange

Available on request.

## Form E

- // For high-speed applications
- // For automatic tool change
- // Coolant supply through center via coolant tube
- // Without any drive keys for absolute symmetry

## Form F

- // For high-speed applications
- // For automatic tool change
- // With enlarged flange size for higher radial rigidity
- // Without any drive keys for absolute symmetry

# Cylindrical shank colletholders CYL

## CYL

### Features and benefits

#### Total system runout TIR $\leq 3 \mu\text{m}$

Our holistic system consists of an micRun® colletholder, collet and clamping nut. All components together ensure best runout and accuracy.

#### Colletholder runout TIR $\leq 1 \mu\text{m}$

Measured from inner taper to cylindrical shank.

#### Surface finish max. Ra 0.25

Achieve high clamping force and high transferable torque.

#### Sizes

CYL / MR 11 and CYL / MRM 16

#### Application

CYL / MR is suited for Swiss automatic machines, machining centers and conventional machines.

#### MR clamping nut included in delivery

Guarantees maximum precision.

#### Vibration dampening

Our holders offer good vibration dampening to sustain a high surface finish and can help prevent chatter.

#### Expert advice

We recommend tightening the clamping nuts using a torque wrench.

*For tightening torque recommendations, please refer to page 50.*

## Collets

MR

page 25

---

# Successful high-precision clamping

Combine our MR colletholders with our MR collets to ensure maximum precision and best balancing to maximize your tool life.

**Experience the quality of the triangle** The outstanding design paired with our experienced engineering make the MR products one of our most accurate toolholding options. What you see is what you get: all our products bear the REGO-FIX triangle – our seal for outstanding Swiss quality.

## Key advantages

### Rely on the original

#### Wide clamping range

The 16-slot design allows for continuing best TIR throughout the MR range.

#### Broad range of products

We offer sizes from MR 11 up to MR 32 and diameters from 1 mm up to 20 mm.

#### Up to 20% more clamping length

Improve your runout with up to 20% more clamping length in smaller diameters.

#### Matched tooling system for best fit

The compatibility of the entire system results in maximum precision, balance and tool life.

#### Swiss quality standard

Our products marked Swiss made are manufactured at our headquarters in Tenniken, Switzerland.

# Finest quality deserves best treatment

Correct assembly increases your collet life and ensures low runout TIR.

## Assembly instructions for MR collets

- // Insert collet groove into the eccentric ring of the clamping nut at the mark on the bottom of the nut
- // Push the collet in the direction of the arrow until it clicks in place
- // Screw the nut with the collet onto the colletholder
- // We recommend to tighten the nut with a torque wrench

For recommended tightening torque please refer to list on page 50.

**Disassembly instructions** After the nut is unscrewed from the colletholder, press on the face of the collet while simultaneously pushing sideways on the back of the collet opposite the mark, until it disengages from the clamping nut.

Assembling

Disassembling

## Expert advice

Improper assembly can permanently damage the runout TIR of the collet and may result in the destruction of the clamping nut. Only mount clamping nuts with correctly assembled collets.

# Innovative products fitting your needs

We offer a wide selection of MR clamping nuts for virtually any application.

## Key advantages

### **Rely on micRun®**

#### **Collet-locking system (pat. pend.)**

Retains collet in nut for easier assembly.  
Further, no tool is need to remove the collet.

#### **Balancing**

Ideal for high-speed applications.

#### **Higher transferable torque**

Lower frictional forces resulting in up to  
80 % higher gripping force over standard nontreated  
clamping nuts.

#### **Cooling available**

Available with sealing disk for coolant through tools.

#### **Suited for high-speed applications**

The micRun® Hi-Q clamping nut is suited for high rpm.

#### **Long life**

Our micRun® Hi-Q clamping nuts come without  
a delicate ball bearing.

#### **Quiet machining**

The grooveless micRun® Hi-Q clamping nuts  
lower noise levels.

#### **Strongest clamping**

A fine thread instead of a ball bearing together with  
a low friction design make our micRun® Hi-Q clamping  
nuts one of the best high-precision clamping nuts on  
the market.

#### **Swiss quality standard**

Our products marked Swiss made  
are manufactured at our headquarters  
in Tenniken, Switzerland.

# Proper assembly protects your runout TIR

## Assembly instructions for MR clamping nuts

- // Click the collet in the nut and experience the power of the unique collet-locking system
- // Put the tool in the collet (minimum insertion length should be  $\frac{2}{3}$  of the collet length, only norm size shafts may be used; never clamp over- or undersized shafts)
- // Put the nut, collet and tool combination on the colletcher using the correct mounting block interface adapter
- // Use the correct freewheel wrench head A-FLS with the smallest torque wrench that can be used for the correct amount of torque needed for this MR nut in combination with the MR collet and the specific tool shank size

For recommended tightening torque please refer to list on page 50.

**Disassembly instructions** After the nut is unscrewed from the colletcher, press on the face of the collet while simultaneously pushing sideways on the back of the collet opposite the mark, until it disengages from the clamping nut.

### Expert advice

We recommend the use of REGO-FIX torque wrenches to prevent any damages to the MR nut.

For recommended REGO-FIX accessories, please refer to page 42.

# Affordable solution for internal cooling

Our sealing disks allow you to use your nonsealed micRun® collet for internal cooling, saving you acquisition costs for new collets.

## Key advantages

### Swiss quality product

#### Sealing range

0.5 mm

#### High pressure

For applications up to 150 bar.

#### Protection

Protects against all kind of dirt and chips entering the slots of the collet.

#### Matched tooling system for best fit

Our long-lasting machining experience results in a well-engineered system. All components are fitted together to one system to maximize your machining potential.

#### Coolant resistant

O-ring for aggressive coolant (VITON®-quality).

#### Interchangeable

Quick change of sealing disks according to required tool shank diameter.

#### Coolant through

For better cooling and lubrication. Extends tool life and supports chip removal.

DS

Assembling

**Assembling** Insert the small diameter of the disk into the center of the coolant nut. Apply an even pressure until the disk is properly seated into the nut.

The disk must be flush with the outside of the nut and the marking on the disk must be visible inside of the nut.

**Removing** To remove the disk, simply press on the outside of the disk evenly until it snaps out.

Inserted DS

## Expert advice

Insert tool with the shank side first. O-ring might be damaged if cutting tool is inserted from the back with the cutting-edge side.

We manufacture products we can be proud of. Together we aim for excellence in every step we take: from the inspiring idea to the finished product.

Passion for precision

# Our solution for peripheral cooling

The design of our coolant flush disks leads the coolant along the edge of the cutting tool, providing you with an easy way to achieve peripheral cooling.

## Key advantages

### Swiss quality product

#### Marking

Type and size (reduced disk selection errors).

#### Traceability

Lot number marking on all products for traceability through the entire manufacturing process.

#### Original REGO-FIX

Our long-lasting machining experience results in a well-engineered system. When buying ER coolant flush disks please pay attention to the REGO-FIX quality seal on the coolant flush disk: The triangle is our seal for outstanding quality made in Switzerland.

#### Universal use

For all REGO-FIX collets and coolant nuts with interchangeable disk.

#### Interchangeable

Quick change of coolant flush disks according to required tool shank diameter.

#### Peripheral cooling

For better cooling and lubrication.  
Extends tool life and supports chip removal.

KS

Assembling

**Assembling** Insert the small diameter of the disk into the center of the coolant nut. Apply an even pressure until the disk is properly seated into the nut.

The disk must be flush with the outside of the nut and the marking on the disk must be visible inside of the nut.

**Removing** To remove the disk, simply press on the outside of the disk evenly until it snaps out.

### Expert advice

To ensure a clearly arranged display and easy handling, the sealing disk bore diameters or collet diameters are marked on the tray.
